OPSWEEK
REAL BUSINESS. OPERATIONAL THINKING. EVERY MONDAY.

The operating decisions behind this week's headlines

THE WEEK IN CONTEXT · 2026-10-04 TO 2026-10-10

01

Indian pharma's risk aversion holding back innovation: Kiran Mazumdar-Shaw

This edition covers 2026-10-04 to 2026-10-10. Each story is examined through an Operations Management framework, with mechanisms to investigate, metrics to monitor, and managerial actions to consider. Because the free pipeline uses RSS metadata and excerpts rather than a generative research model, analysis distinguishes reported context from hypotheses and prompts for further investigation.

INTERNATIONAL · OPERATIONAL RESILIENCE

AI can enhance 5G network performance by 30%: Ericsson

Telecom giants, including Reliance Jio and Bharti Airtel, are set to harness AI technology to enhance their 5G networks, potentially boosting performance by up to 30 percent using current hardware. According to Ericsson, these software upgrades could roll out without needing to wait for 6G infrastructure. However, the integration of AI raises cybersecurity concerns as these networks evolve.

Operations lens: Infrastructure and energy availability can shape operating continuity, cost, and capacity.

Mechanisms to investigate: A critical utility or infrastructure dependency can constrain otherwise available capacity. Price volatility affects both operating cost and planning assumptions.

Metrics to watch: Energy cost per unit of output · Unplanned interruption hours · Share of energy from critical single sources

Manager actions: Map critical dependencies and their recovery times. Stress-test operating plans against interruption and price scenarios.

Evidence: Summary uses the available RSS excerpt. The operational mechanisms, metrics, and actions are analytical prompts, not verified causes or reported company decisions.

> **Manager's takeaway:** Plan for operational dependencies and build contingencies around critical resources.

INDIA · SUPPLY CHAIN RESILIENCE

Andhra factory makes 3 million tea bags daily for global giants Walmart, Aldi and Carrefour

Everton Tea India thrives in Tirupati, manufacturing a whopping three million flavored tea bags each day for international markets. Since its inception in 2012, the company has seen impressive growth, employing about 300 individuals. Sourcing primarily from Indian plantations while also importing from China and Kenya, Everton is poised to capitalize on the increasing global appetite for healthy drinks. Its strategic location in Sri City enhances its shipping capabilities.

Operations lens: Supplier availability, sourcing choices, and disruption risk can affect cost and continuity.

Mechanisms to investigate: Supplier concentration can amplify the effect of a single disruption. Long or variable lead times make recovery and inventory planning harder.

Metrics to watch: Supplier on-time-in-full (OTIF) · Supplier lead-time variability · Defect rate and cost of poor quality

Manager actions: Map critical inputs and single points of failure. Compare suppliers on total cost, reliability, quality, and recovery time.

Evidence: Summary uses the available RSS excerpt. The operational mechanisms, metrics, and actions are analytical prompts, not verified causes or reported company decisions.

> **Manager's takeaway:** Balance purchase price with reliability, lead time, quality, and the total cost of disruption.

INTERNATIONAL · LOGISTICS AND FLOW

Riyadh airport attacked again as Saudi Arabia

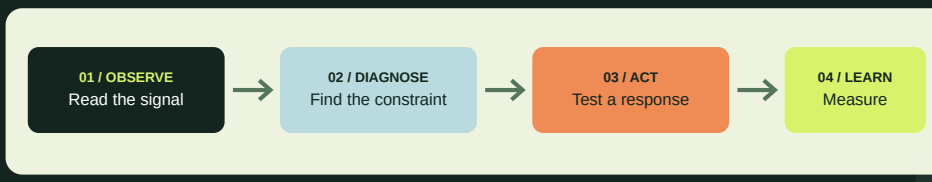

The decision behind the headline.

Operations is where strategy meets the real world: time, capacity, people, suppliers, quality, and cost. Here is how this week's events connect to management concepts.

THIS WEEK'S LEARNING THEME

Operational Resilience

An organization's ability to sustain or restore critical operations when demand, supply, infrastructure, or processes are disrupted.

INTERNATIONAL · OPERATIONAL RESILIENCE

AI can enhance 5G network performance by 30%: Ericsson

Telecom giants, including Reliance Jio and Bharti Airtel, are set to harness AI technology to enhance their 5G networks, potentially boosting performance by up to 30 percent using current hardware. INDIA · LOGISTICS AND FLOW

India-Norway energy ties broadening, LNG supplies have begun, says Norwegian official

Norway's State Secretary Astrid Bergmal highlighted the expanding India-Norway energy partnership during her visit to India. This partnership includes LNG supplies, renewable energy, and green hydrogen initiatives. Equinor's recent LNG delivery to Gujarat marks a significant milestone in their cooperation. Norway's seafood exports to India have also seen remarkable growth under the India-EFTA TEPA agreement. Around 160

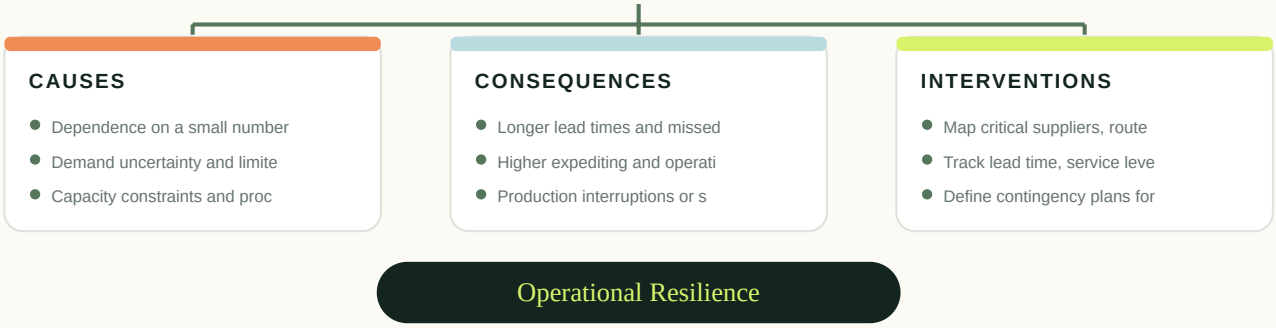

INDIA · LOGISTICS AND FLOW

Nana Patekar: The actor whose works represented the kaleidoscopic range of the common man's life

Nana Patekar, a prominent actor, brought the common man's experiences to life through his powerful performances. His dedication to theatre and film was evident in his diverse roles and artistic vision. Patekar's transition from parallel cinema to mainstream films demonstrated his broad range as an actor. His portrayal of complex characters resonated with audiences, showcasing various emotional shades. Ultimately, he left a lasting legacy in

One concept. Connected thinking.

Use this map to move from definition to causes, consequences, and possible interventions.

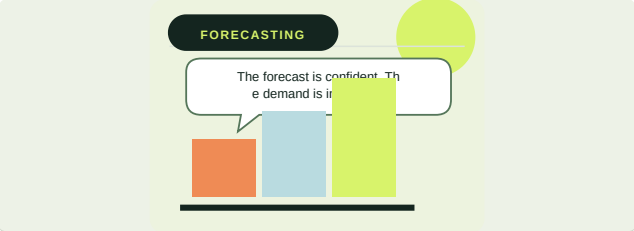

NEWS CONNECTION
For each linked story, separate the reported event from the operational mechanism you suspect. Then identify the data that would confirm or reject that hypothesis.

TAKEAWAY: Good operations analysis does not stop at what happened. It asks how the process could transmit the impact, what evidence would prove it, and which intervention improves the whole system.

Concept maps simplify complex systems for learning. Actual management decisions require case-specific evidence.

Operations is serious. Managers are human.

Three familiar moments from the world of processes, planning, and procurement.

FORECASTING

The forecast said a surge was coming. The warehouse is now fully stocked for a demand spike that exists only in the spreadsheet.

Lesson: forecasts are inputs to decisions, not facts.

BOTTLENECKS

Every department hit its target. The customer is still waiting because the slowest step never changed.

Lesson: optimize the whole flow, not every silo.

PROCUREMENT

We saved 5% on the unit price. Then paid 20% more for urgent freight.

Lesson: purchase price is not total cost.

THE WEEKLY TAKEAWAY

Fix the system, not just the symptom.

Before asking people to work harder, examine the process, constraints, incentives, information, and feedback loops shaping their decisions.

THE 30-SECOND OPS QUIZ

A warehouse has excess stock of slow-moving products but keeps running out of its bestsellers. Which topic would you investigate first?

A. Inventory classification and demand forecasting **B.** Office seating **C.** Logo design

Answer: A. Investigate demand patterns, replenishment rules, lead times, and inventory segmentation.

Cartoons in this edition are original illustrative scenarios, not claims about specific companies.
